

Mansfield Cosmetic Surgery Center Offers Comprehensive Breast Implant Removal Services Under the Expert Care of Dr. Michael L. Thornton

August 23, 2024

Mansfield, Texas - August 23, 2024 -

Mansfield Cosmetic Surgery Center, led by Dr. Michael L. Thornton, is pleased to announce a new article on breast implant removal, addressing the needs of patients experiencing complications or seeking to return to their natural breast size (found on the Center's website here: <https://mansfieldcosmeticsurgery.com/breast-implant-removal/>). Dr. Michael L. Thornton, a fellowship-trained, double board-certified cosmetic surgeon and Diplomate of the American Board of Cosmetic Surgery, leads this initiative, offering unparalleled expertise and compassionate care to patients from Mansfield, Arlington, Fort Worth, and Dallas, Texas.

Breast implant removal is a significant decision influenced by a variety of factors including implant complications, personal health concerns, or changes in aesthetic preference. Dr. Thornton, renowned for his meticulous approach and dedication to patient well-being, understands the complexities involved in making such a choice. Patients may face issues like capsular contracture, a condition where internal scar tissue hardens around the implants causing pain and deformity, or may experience implant leakage or rupture over time. Additionally, some individuals suffer from Breast Implant Illness (BII), presenting symptoms such as

fatigue, joint pain, and cognitive difficulties, which are believed to be linked to their breast implants.

The breast implant removal procedure, typically performed as an outpatient service under general anesthesia, involves carefully removing the implants through incisions made around the areola or under the lower breast fold. In cases where abnormal scar tissue or thickened capsules have formed, these are also removed to alleviate discomfort and prevent further complications. Dr. Thornton's meticulous surgical technique minimizes recovery time and maximizes patient comfort, allowing most individuals to resume normal activities within several weeks. Post-operative care includes wearing a support bra or compression garment to reduce swelling and the use of small drain tubes if necessary.

Patients undergoing breast implant removal can expect several benefits, including relief from pain caused by capsular contracture, reduced neck or back pain from the removal of heavy implants, and potential resolution of Breast Implant Illness symptoms. Additionally, many find the return to their natural breast size to be a positive step towards regaining their original body image. For those concerned about the appearance of their breasts post-removal, Dr. Thornton offers secondary procedures such as mastopexy, or breast lift, to remove excess skin and enhance the breast contour.

Dr. Thornton emphasizes the importance of a thorough consultation to discuss the patient's medical history, current health status, and specific concerns regarding breast implant removal. This consultation is a vital step in ensuring that each patient is fully informed and confident in their decision. The consultation also provides an opportunity to discuss additional procedures that may be beneficial, such as a breast lift, to achieve the desired aesthetic result.

The decision to remove breast implants can significantly enhance a patient's quality of life, particularly for those experiencing ongoing complications like capsular contracture, implant rupture, or chronic pain. Dr. Thornton's commitment to personalized care and his extensive experience in cosmetic surgery make Mansfield Cosmetic Surgery Center a trusted destination for individuals considering this procedure. Patients can expect a compassionate and professional environment where their health and aesthetic goals are the top priority.

For potential patients, Mansfield Cosmetic Surgery Center provides a wealth of resources to help make an informed decision. The center's website features detailed information on breast implant removal, including procedural steps, and recovery expectations. Scheduling a consultation is made easy through the website, allowing individuals to take the first step towards improved health and confidence with Dr. Thornton's guidance.

In summary, Mansfield Cosmetic Surgery Center's focus on breast implant removal under the expert care of Dr. Michael L. Thornton highlights the center's commitment to providing top-tier cosmetic surgery services. Contact Mansfield Cosmetic Surgery Center today to learn more, schedule a consultation, and embark on a journey towards renewed confidence and well-being.
